Satin Silver
Cool Roof & Wall Sheets

- Good Corrosion Resistance
- Better Thermal Efficiency
- High Strength & Durable
- Long Lasting Aesthetics
- Economical

*Satin Silver Sheets have a better heat reflective index making it cooler than conventional metal sheets.
Tata BlueScope Steel is an equal joint venture between Tata Steel and BlueScope Steel, Australia. The company offers premium steel roof and wall profiles for residential, commercial and industrial applications.

Tata BlueScope Steel offers Satin Silver Sheets coated with 55% Aluminium-Zinc alloy that last up to two to three times longer than Zinc coated steel sheets in similar environment.

The blending of aluminium with zinc gives a protective coating with excellent luster and high strength. The alloy coating provides superior corrosion resistance and better thermal efficiency than other building materials.

Satin Silver Sheets are lightweight and require lesser amount of framing in roofing design.

### Product Range

#### Specification
- **Total coated thickness (mm):** 0.35 / 0.45 / 0.50 / 0.60
- **Sheet length* (mm):** 2440 (8ft), 3050 (10ft), 3660(12ft), 4270 (14ft), 4880 (16ft)
- **Effective cover width (mm):** Nominal 1015
- **Overall width (mm):** Nominal 1072
- **Minimum roof slope (degree):** 3

* Sheet length in feet is approximate value

The elegant appearance of the Liner makes it suitable for applications such as false ceilings, partition facings, screens, garage doors, fascias and barge boards.
Satin Silver LongLine Crimp

Benefits:
- No gutter required
- Single length in standard sheet

Typical Applications

Type - A

Type - B

Typical Sheet Arrangements

- Double slope roof with crimp ridge
- Crimp ridge

*Note: Images of the profile with the guard film are only for reference. THE GUARD FILM SHOULD BE REMOVED IMMEDIATELY ON INSTALLATION.
Benefits of *Satin Silver* Sheets

**Long Lasting & High Strength**

The base steel of Satin Silver Sheets is coated with 55% Al-Zn Alloy coating. The unique spangle structure of these sheets provides better corrosion resistance and greater resistance to cracking and peeling. Satin Silver Sheets last up to two to three times longer than zinc coated steel sheets in similar environment.

The high yield strength of 550 MPa minimum and a rib height of 28 mm (where as most of sinusoidal profile have a rib height of about 18 mm) provide higher profile strength and offer greater resistance to dents and damages. (Refer Fig. 1)

Wider spans, with lesser thicknesses are possible due to the high strength of Satin Silver Sheets. (Refer Fig. 2)

**Leak-proof Performance**

The Anti-capillary grooves of the Satin Silver Sheets ensure no water seepage.

**Better Rain Water Carrying Capacity**

The 28.5 mm rib depth and 203 mm wide span ensure quick and easy drainage of rain water and leave no room for water leakage.

**Design Flexibility**

Satin Silver Sheets are lightweight, easy to handle and can be installed faster than conventional materials. These sheets can be crimped as well as installed at roof slopes as low as 3 degrees.
Better Thermal Efficiency

Satin Silver Sheets have a lower thermal mass and a high solar reflective index of more than 85% enabling it to reflect a greater portion of the sunlight as compared to Zinc coated steel sheets.

Mark Resistance

The resin coating on Satin Silver Sheets provides additional protection from hand & finger prints, boot marks and water impressions caused during transportation, storage, handling and installation.

One Rib Side Lap & Wider Effective Width

Usually in sinusoidal profile the effective width v/s overall width ratio is very low. The side lap required in these profiles is high, thus increasing project costs. Whereas Satin Silver Sheets require only a single rib side lap offering a more effective width as compared to any ordinary sheets resulting in cost savings.

Economical

Satin Silver Sheets have wider spans and are light weight, easy to handle, transport and install resulting in savings on overall costs.

Branded Product

Satin Silver Sheets is an offering by DURASHINE® a brand of Tata BlueScope Building Products. The brand assures of the highest quality products. You can look for the brand mark which is present at regular intervals on the reverse side of the sheet.
Guard Film
Tata BlueScope Building Products’ Satin Silver Sheets come with the added protection of the Guard Film. The film not only adds protection to the sheet during storage, handling and installation but also enables the customer to identify the Tata BlueScope Building Products brand.

Removal of Guard Film
The guard film should be removed immediately on installation.

Disclaimer on Condensation
Condensation is the natural formation of water droplets on the bottom side of any installed metal roofing sheet. It may occur when there is a difference in temperature between the air in the building and the sheet itself, causing the water vapour (moisture) in the air to condense on the inside of the sheet. It is a natural phenomenon and hence no claims will be entertained in this regard.

The risk of condensation may be minimised by providing proper ventilation arrangement in the roofs and by using suitable insulation.

Maintenance Recommendation: Clean and maintain your roof regularly to remove dust and dirt.
