

FORTISS 470™ - The New Age Standing Seam is here!

Engineered by Experts, Delivered with Perfection

Standing Seam Roofing System is one of the many offerings within the metal roofing spectrum that promise greater leakproof performance, balance modern & contemporary architecture, and is a great profile to strengthen your structure.

FORTISS 470™ by Tata BlueScope Steel is the new generation of 360° seam locked roofing system. Its unique design of the clip and profile deliver excellent weather-tightness performance. The one-of-a-kind system, FORTISS 470™ is an ideal choice for large industrial, commercial, and warehousing buildings, looking for bigger spans, better performance, a quick turnaround, and customization.

360° Lock Profiles

FORTISS 470™ profiles are rolled formed with specific edges that line up with each other. Once the two panels are engaged, a hand or mechanical seamer bends the edges and locks the panels together. Roof panels are permanently seamed together with a 360° Pittsburgh Double-Lock Seam creating a single steel membrane, floating, monolithic roof. This seam is the same as seams on beverage cans and auto gasoline tanks. Thus, creating the tightest seam available today.

FORTISS 470™ Advantages

- 360 Degree Standing Seam with on-site roll forming
- High rib traverse flutes for better stability
- Floating system for easy thermal expansion and contraction
- Optimized thickness as per customer requirement
- Single sheet from rib to eave for assured weather-tightness

Moreover, FORTISS 470™ Roofing and Walling is manufactured from high-strength COLORBOND® and ZINCALUME® steel that promise superior aesthetics with a greater degree of corrosion resistance.
